

IBM Internet Security Systems

Product Lifecycle Announcement: General Availability (GA)

March 28, 2007

IBM Proventia® Network IPS GX3002

The IBM Proventia Network Intrusion Prevention System (IPS) GX3002 is now available for immediate shipment. The GX3002 extends Proventia's industry-leading preemptive protection further into the remote segments of the network, preventing attacks against small offices and mission critical end points (ATMs, Point-of-Service, self-help kiosks, etc.). Until now, companies needing to protect these points have only had limited-feature IPS offerings available to them. This product provides the same robust features found in other Proventia Network IPS products, while still meeting the lower cost requirements for remote segments.

Features include:

- 10 mbps line speed
- 2 x 10/100 copper Ethernet network interfaces (one protected segment)
- Central management via LMI and SiteProtector
- Fail open to traffic internal bypass feature
- Layer 2 architecture
- Desktop form factor
